Professional Summary

Computer Science graduate and Software Engineer with experience developing maintainable software using C#, C++, C, and Python. Experienced in backend and application development, performance optimization, data-driven analysis, and building reliable software using sound engineering practices. Strong foundation in algorithms, object-oriented programming, data structures, machine learning, and data pipelines, with experience collaborating in Agile teams, participating in code reviews, and improving application performance through profiling and multithreading. Interested in systems software, Windows technologies, performance analysis, and understanding interactions across application and operating-system layers.

Professional Experience

Proclink Consulting Services **July 2025 – Present**
Associate Software Engineer *Hyderabad, India*

- Designed and maintained scalable software services using ASP.NET Core and C#, applying object-oriented design and software engineering fundamentals to build maintainable applications.
- Developed RESTful APIs and optimized database queries for high-throughput applications, focusing on application reliability and performance.
- Investigated and improved application performance using profiling and multithreading techniques, contributing to more responsive and reliable software.
- Collaborated in Agile development teams, participated in code reviews, and incorporated engineering feedback while working with CI/CD practices.

Education

Indian Institute of Technology, Guwahati **2021 – 2025**
B.Tech., Computer Science and Engineering *CGPA: 6.51*
Telangana State Board of Intermediate Education **2021**
Senior Secondary (Class XII) *99%*
Board of Secondary Education, Telangana **2019**
Secondary (Class X) *GPA: 10.0*

Projects

Employee Management System | *C#, ASP.NET Core 8.0, WinForms, ADO.NET* | Backend Frontend **Jun 2025**

- Developed a secure application using ASP.NET Core and C#, implementing RESTful APIs, JWT authentication, and role-based access control.
- Built a Windows Forms application communicating through HTTP/JSON, implementing CRUD operations, filtering, and application-layer functionality.
- Applied parameterized ADO.NET queries and object-oriented design to improve security, maintainability, and code quality.

Insurance Claim Prediction (Porto Seguro) | *Python, Scikit-learn, XGBoost, LightGBM, Flask* | GitHub **Dec 2025 – Feb 2026**

- Built and optimized classification models on a 600K+ record dataset using Decision Trees, Random Forest, XGBoost, and LightGBM.
- Developed a data preprocessing pipeline covering missing-value handling, feature encoding, feature engineering, and class-imbalance treatment.
- Evaluated model behavior using ROC-AUC and iterative hyperparameter tuning, using quantitative results to guide optimization decisions.
- Integrated the trained model with a Flask API, connecting data-driven analysis with an application layer.

Air Quality Index Prediction | *Python, Scikit-learn, Jupyter Notebook* | GitHub **Feb – Apr 2024**

- Implemented regression algorithms including Linear Regression, Decision Tree, Random Forest, and SVR from scratch to strengthen algorithmic and analytical foundations.
- Performed data cleaning, normalization, feature selection, and model evaluation using MSE and R^2 to compare and improve solutions.
- Applied iterative hyperparameter tuning and quantitative evaluation to identify optimization opportunities and improve model performance.

Smart City Management System | *VB.NET, WinForms* | GitHub **Feb – Apr 2024**

- Designed and developed a Windows desktop application using VB.NET and WinForms in a collaborative team environment.
- Led development of the Transportation Module and implemented application workflows for vehicle registration, toll management, and ride-sharing administration.
- Collaborated with team members to design application functionality and communicate technical requirements during development.

Digit Recognition (MNIST) | *TensorFlow, Keras, Python* | GitHub **Mar – May 2024**

- Developed a CNN model using TensorFlow/Keras achieving 98%+ accuracy for handwritten digit classification.
- Applied dropout and data augmentation to improve model generalization and evaluated behavior using confusion matrices and learning curves.

AI Software Engineer Assistant | *Groq LLM, Panel, Docker, GitHub Actions* | GitHub **May 2026**

- Built a Generative AI chatbot using Groq LLM APIs and Panel, enabling interactive software engineering assistance through a web-based interface.
- Designed session-aware conversation management and prompt templates to improve response relevance and maintain conversational context.
- Automated Docker-based deployment to Hugging Face Spaces with GitHub Actions, streamlining CI/CD and cloud hosting.
- Applied secure configuration management using environment variables for API key protection and deployment portability.

Technical Skills

Programming Languages: C++, C, C#, Python, JavaScript

Software Engineering: OOP, Algorithms, Data Structures, REST APIs, Multithreading, Performance Optimization

Application Development: ASP.NET Core, WinForms, ADO.NET, JWT Authentication

Data & Analytics: SQL, MySQL, Scikit-learn, XGBoost, LightGBM, Pandas, Data Preprocessing

Machine Learning: PyTorch, TensorFlow, Keras, Transformers, Neural Networks, CNNs

Tools & Practices: Git, Docker, CI/CD, Agile, Code Review, Jupyter, LeetCode

Achievements

- **JEE Advanced 2021:** All India Rank **1529** out of 1,05,000+ candidates
- **JEE Main 2021:** All India Rank **1462** with **99.8828 percentile**
- **NTSE 2019:** Qualified among top **0.85%** students in India
- **CodeChef:** Global Rank **1250** in Starters 194 (July 2025)
